Trimax commits to turf growers

Trimax Mowing Systems has recently shown its commitment to the turf industry by becoming a member of Turf Producers International (TPI) which has members in several countries including the United Kingdom and USA.

Pegasus excels on turf farms across the USA

The Trimax manufacturing base and headquarters is located in New Zealand with autonomous Trimax companies located in Northamptonshire in the UK and Georgia in the USA.

Over the past two years Trimax has entered the US turf market with the Pegasus wide area rotary mower. The response has been astounding.

Experienced turf farmers have been amazed at the machines' performance and their ability to mow grasses like Bermuda at extremely low cut heights. This has resulted in significant demand for both the 493 and the wider 610 (6.1 metre cut) models. Many growers have found the finish produced by Pegasus so good they now use them instead of cylinder mowers for the final cut before

harvesting. One owner was so impressed by his first machine that he now owns eight!

This year the Trimax Pegasus is to be exhibited at the **TPI Summer Convention on July 20 in Memphis, Tennessee, USA.**

Pegasus, along with other rotary mowers from the Trimax range, is also a popular choice among UK turf farms. It will again be exhibited at the **Saltex exhibition at Windsor race course on September 5th-7th.** Not only will the standard machine be shown, but Trimax's stunning 25th anniversary 'special edition' model will also be on display.

If you are a UK-based turf grower and are unable to attend either show but would still like to see the Pegasus please give Trimax a call on 01933 652235 to arrange a demonstration "on your home turf".

US-based turf growers can contact Trimax to arrange a demonstration by calling 1-800-523 1167.
